

My name is Ivan. I come from Zagreb. There I finished high school Nikola Tesla and enrolled in the study of Computer Designer at the Technical Polytechnic in Zagreb. I completed a specialist study of Design and Multimedia at the same faculty.

My hobbies are playing games, walking in nature, photography, listening to music.

I have been designing for several years. I have extensive experience in the making of various projects. Currently, I am mostly dedicated to 3D visualization and animation. Also, I deal with graphic design, web design, photography and photo processing, and video production. In addition to college-related projects, I also worked on personal projects that were specific to clients.

When I am designing, I like the feeling of freedom and the fact that new solutions and ideas are constantly being born. In this business, the most important thing is to understand the clients, to respect their opinion, and to reach a solution together with them. It is also important to love what is doing because this is the only way we can enjoy the work and come back to it again.
