PROFIL

I graduated in the specialist study of Design and Multimedia at the Zagreb University of Applied Sciences and I have been designing for several years. I have extensive experience in making various design projects. At the moment, I am mostly dedicated to 3D visualization and animation. Besides, I deal with graphic design, 2D animation, web design, photo processing, and video production. In addition to college-related projects, I also worked on personal projects that were specific to clients.

In the design business, I like the feeling of freedom the most and the fact that new solutions and ideas are constantly being born.
